## **1D Oxide Nanostructures Obtained by Sol-Gel and Hydrothermal Methods (SpringerBriefs in Materials)** Crina Anastasescu, Susana Mihaiu, Silviu Preda, Maria Zaharescu

This book presents wet chemical sol-gel and hydrothermal methods for 1D oxide nanostructure preparation. These methods represent an attractive route to multifunctional nanomaterials synthesis, as they are versatile, inexpensive and, thus, appropriate for obtaining a wide range of oxide materials with tailored morphology and properties. Three specific oxides (SiO<sub>2</sub>, TiO<sub>2</sub>, ZnO) are discussed in detail in order to illustrate the principle of the sol-gel and hydrothermal preparation of 1D oxide nanostructures. Other oxides synthesized via this method are also briefly presented.

Throughout the book, the correlation between the tubular structure and the physico-chemical properties of these materials is highlighted. 1D oxide nanostructures exhibit interesting optical and electrical properties, due to their confined morphology. In addition, a well-defined geometry can be associated with chemically active species. For example, the pure SiO<sub>2</sub> nanotubes presented a slight photocatalytic activity, while the Pt-doped SiO<sub>2</sub> tubular materials act as microreactors in catalytic reactions. In the case of titania and titanate nanotubes, large specific surface area and pore volume, ion-exchange ability, enhanced light absorption, and fast electron-transport capability have attracted significant research interest. The chemical and physical modifications (microwave assisted hydrothermal methods) discussed here improve the formation kinetics of the nanotubes. The ZnO nanorods/tubes were prepared as random particles or as large areas of small, oriented 1D ZnO nanostructures on a variety of substrates. In the latter case a sol-gel layer is deposited on the substrate prior to the hydrothermal preparation. Using appropriate dopants, coatings of ZnO nanorods with controlled electrical behavior can be obtained.

**From reader reviews:**

**Lila Smith:**

Book is to be different for every grade. Book for children until eventually adult are different content. We all know that that book is very important for people. The book 1D Oxide Nanostructures Obtained by Sol-Gel and Hydrothermal Methods (SpringerBriefs in Materials) had been making you to know about other know-how and of course you can take more information. It is rather advantages for you. The book 1D Oxide Nanostructures Obtained by Sol-Gel and Hydrothermal Methods (SpringerBriefs in Materials) is not only giving you much more new information but also being your friend when you experience bored. You can spend your personal spend time to read your publication. Try to make relationship using the book 1D Oxide Nanostructures Obtained by Sol-Gel and Hydrothermal Methods (SpringerBriefs in Materials). You never really feel lose out for everything if you read some books.

**Charles Smith:**

Your reading sixth sense will not betray an individual, why because this 1D Oxide Nanostructures Obtained by Sol-Gel and Hydrothermal Methods (SpringerBriefs in Materials) reserve written by well-known writer whose to say well how to make book which might be understand by anyone who have read the book. Written within good manner for you, still dripping wet every ideas and composing skill only for eliminate your own hunger then you still uncertainty 1D Oxide Nanostructures Obtained by Sol-Gel and Hydrothermal Methods (SpringerBriefs in Materials) as good book not simply by the cover but also by the content. This is one reserve that can break don't assess book by its handle, so do you still needing yet another sixth sense to pick this specific!?! Oh come on your studying sixth sense already told you so why you have to listening to yet another sixth sense.

**Naomi Taylor:**

Is it an individual who having spare time in that case spend it whole day by simply watching television programs or just lying on the bed? Do you need something new? This 1D Oxide Nanostructures Obtained by Sol-Gel and Hydrothermal Methods (SpringerBriefs in Materials) can be the reply, oh how comes? The new book you know. You are so out of date, spending your spare time by reading in this fresh era is common not a nerd activity. So what these publications have than the others?

**Amy Smith:**

As a scholar exactly feel bored for you to reading. If their teacher requested them to go to the library or to make summary for some guide, they are complained. Just small students that has reading's spirit or real their passion. They just do what the instructor want, like asked to go to the library. They go to there but nothing reading very seriously. Any students feel that examining is not important, boring as well as can't see colorful photographs on there. Yeah, it is to be complicated. Book is very important for you. As we know that on this

time, many ways to get whatever you want. Likewise word says, ways to reach Chinese's country. Therefore , this 1D Oxide Nanostructures Obtained by Sol-Gel and Hydrothermal Methods (SpringerBriefs in Materials) can make you experience more interested to read.
